No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

```
This mulcould a sequence from Ervinia maylorous includes a coding or region for a 19 both pypersentitive ellitory protein (HEE, see a AMSCHI4) that is here stable, has a pi of 4.3 and is heat stable at the market of business of the protein control of the second of the control of the protein control of the second of the parties of the protein control of assets as a sense of impartity pathogen resistance to plants or around from the seeds as alternatively, bacteria containing the see around the seeds as a second of the pathogen resistance to plants or protein are used. HEE polympities expunces from Ervinia or protein are used. HEE polympities expunces from Ervinia or protein are used. HEE polympities expunces from Ervinia or protein are used. HEE polympities expunces from Ervinia or protein are used. HEE polympities expunces from Ervinia or protein are used. HEE polympities expunces from Ervinia or protein are used. HEE polympities expunces from Ervinia or bacteria or protein are used. HEE polympities expunces from Ervinia or bacteria or protein are used. HEE polympities expunces from Ervinia or bacteria or protein are used. HEE polympities expunces from Ervinia or bacteria or protein are used. HEE polympities expunces from Ervinia or bacteria or protein are the polympities or protein are used. HEE polympities or protein are bacterial content, or to advance polympities or protein are the polympities.

Index 100.0h 100	The patent discloses a method to impart stress resistance to plants by applying a hypersonsitive response elicitor in a mon-infectious form to a plant or seed. The present sequence is a two encoding hypersonsitive response elicitor procedum from Establa may locate and the present sequence is used to transform transperio plant or plant sector to impart stress resistance.	P-980B, AWY1093. Application of a Mypersensitive response elicitor protein to plants to impuri stress resistance . Disclosure: Page 9; 84pp; English.	55 H B	00028055-A2. MAY-2000.                                                                                                                                                                                                                                                                                         or The invention relates to a chimeric gene that includes a first DNA colocule scould no. Physicians live response children protects or to hypothesis premitted generally first and the first DNA scott.

On the protects of the first DNA solecule. The invention also relates operably linked to the first DNA solecule. The invention also relates operably linked to the first DNA solecule. The invention also relates of the children of the first DNA solecule. The invention also relates the promoter because the invention of the first DNA solecule in the promoter because the description of the first DNA solecule. The invention also relates the promoter induces transcription of the first DNA solecule in the general colocular plant by an objecte, the chimarks generally and the solecule in the plant by an objecte, the chimarks generally and the solecule in the plant by an objecte, the chimarks we can describe the solecule in the plant by an objecte, the chimarks generally and the solecule in the plant by an objecte the plant by an objec
